The Modernization & Centralization of I.T.

MDBilling.ca

MDBilling.ca (www.mdbilling.ca) is a cloud-based OHIP Billing software that was founded to support the increasing demands for fast, accurate, and reliable medical billing. Their goal is simple: save time, earn more. The idea for their product was the result of a frustrated physician looking for a billing software that was easy to use and inexpensive. The founders saw the need, got together with a set of key features, and decided to pursue the development of a cloud (Internet) based OHIP billing software. The company was founded in 2008 and a year later, the first version of the software was launched. Since 2008, they have grown exponentially. Today they have over 10 passionate employees helping thounsands of physicians and numerous hospitals with their OHIP billing. You can visit them at www.mdbilling.ca

The Challenge

FLEXABILITY & SCALABILITY
Satisfy the demand for their SaaS model to serve thousands of clients.

MIGRATION
Migrate / move all assets & data to the new cloud environment.

CUSTOMER SERVICE
Provide a high level of customer service and support for their cloud infrastructure.

> *"Server Cloud Canada's VM's and customer service are far superior to our previous service provider."*
>
> **Paul Shortt**
> *Chief Technology Officer*
